eHealth-TeleMedicine Solutions

- e-ICU/Tele-ICU
- eDialysis
- Pre-Planned Specialist Consultation

PATIENT CARE SOLUTIONS

e-ICU, e-Dialysis, e-Trauma & pre-planned consultation with large spectrum of specialists. eHealth-TeleMedicine services provide innovative, cost effective answers for hospitals and patients nationwide seeking immediate 24/7 access to experienced specialists. Our eHealth-TeleMedicine platform solution, allows hospitals to build an eHealth-TeleMedicine program using their own physicians to suit their unique needs while leveraging our state-of-the-art technology and operating platform.

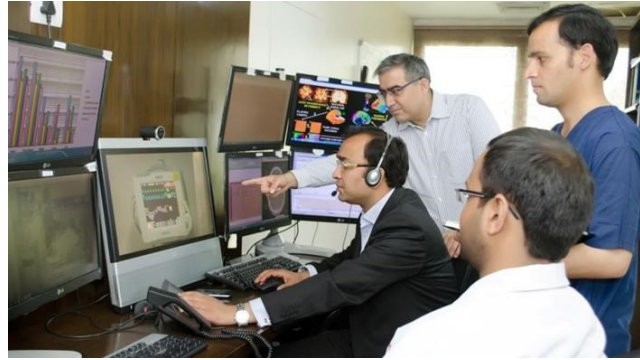

Global Medical Solution Provider

eICU/TeleICU

eICU is a 24*7 remote ICU patient monitoring system aided by Real-Time two way audio-visual and smart alerts. It's a real blend of medical technology, sophisticated telemedicine to improve critical care delivery.

It provides a solution to scarcity of critical care resources and the growing shortage of specialist clinicians. It's a clinically proven program to improve quality outcomes & to reduce ICU mortality rates.

eICU/TeleICU

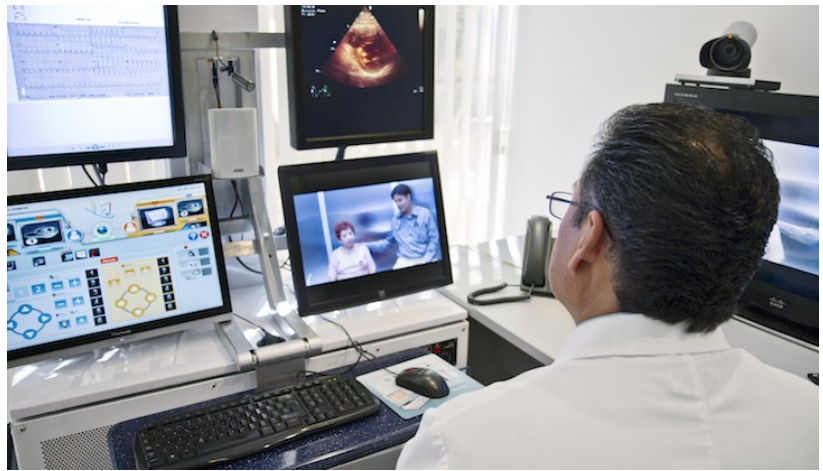

The e-CU Service can be broadly classified into three distant entities working in tandem to provide a high-end technology led solution that functions seamlessly between clinicians, hospitals and patients.

The patients hospital / ICU Department, is linked by cloud servers, to a central command center. This delivers the following

- Consultation between the local ICU clinicians and specialist clinicians that are not available in the local hospital.
- Daily patient assessment.
- Schedule a convenient time for ICU staff, at the start of the day or each shift. Increasing the efficiency of clinicians and the department.
- Assess the ongoing integrity of care as our e-Intensivist / tele-Intensivist proactively seek ways to improve the local service offering.
- Reduction in Mortality Rates and Length of stay. Results in improved patient outcomes and better utilization of beds.
- Reduced Hospital Acquired Infections (HAI).
- Deliver consistent and standardized critical care resulting in less use of high-end antibiotics.
- Reduction in Nursing Numbers E-Monitoring helps in reducing nursing manpower and saves cost while bringing more efficiency to the entire system.
- Two-way cameras, video monitors, microphones and smart alarms connected by high speed data lines provide e-ICU caregivers, who are called Intensivist, with real-time patient data around the clock.

eDialysis

eDialysis delivers access to specialist dialysis clinicians who are able to provide cost effective management plans.

eDialysis

eDialysis provides a high-end technology led solution that functions seamlessly between clinicians, hospitals and patients.

The patients hospital / OPD , is linked by cloud servers, to our Specialist dialysis OPD . This delivers the following

- Monthly review of patient by specialist nephrologist clinicians
 - Note these reviews can be conducted as required by local clinicians or patient needs.
- Using our E-Prescription service clinicians and patents can access and maintain a record of ongoing treatment.
- Patients may spend less time in local In or out patient departments allowing for better utilization of local resources.
- Reduced Hospital Acquired Infections (HAI),
- Reduced cost per patient.
- Improved revenue opportunities for the facility.
